Measuring Systems of Temperature and Humidity of the forage

AgriCo offers a wide range of sensors for measuring forage humidity and temperature for the most demanding farmers. With thirty years of experience in the construction and sale of technologies in the agricultural field, AgriCo has developed ForUm01 and Rot01

THE QUALITY IS IN YOUR HANDS

ForUm01 and **Rot01** are professional measuring instruments that determine the humidity and temperature of baled forage by inserting the measuring probe.

The temperature and humidity readings are instantaneous, ensuring rapid work.

The illuminated display facilitates work even at night.

Able to set audible and visual alerts when humidity and/or temperature thresholds are exceeded.

Used in agriculture, forage trading, drying systems, and even for wood chips.

Available in versions suitable for round bales and big balers.

Both instruments are constructed with the best materials on the market, such as AISI304 stainless steel, anodized anticorodal aluminum, an ABS casing protected by a silicone shell available in various colors, a high-resistance plastic insulator.

Why use ForUm01 and Rot01:

- To monitor the fermentation status measured as a percentage of humidity and temperature occurring inside round bales and big forage balers
- To have the peace of mind of storing the product in barns after fermentation is complete and therefore at a suitable temperature without fear of possible spontaneous combustion

- To ensure the quality of the forage and protect it from damage caused by fungal infections or decay
- Because it is very handy, compact, lightweight, yet at the same time very robust
- Because it is an excellent professional tool accessible even to private individuals
- Because it allows you to monitor humidity at the time of harvest, purchase and sale

Technical Specifications

ForUm01

- Ergonomic, non-slip aluminum handle
- Extensive customizable menu (colors, sounds, alarms, etc.)
- Continuous display during measurement for quick analysis of moisture at various points in the bale
- Save and average function
- No calibration required
- Possibility of remote control of the instrument via cable

Rot01

- It is a measuring instrument for detecting forage moisture during baling
- Moisture is detected every second and displayed on the display located in the tractor cab
- It can be installed on the side wall of any baler, while the system is powered by the tractor's electrical system

ForUm01 and Rot01

	MEASURING RANGE	ACCURACY	UNIT OF MEASURE
HUMIDITY	8,0 ~ 50,0	± 0,8	%
TEMPERATURE / NO ROT01	-9,9 ~ 99,9	± 0,3	°C
MEMORY CAPACITY	99		readings
PROBE LENGTH	from 25 to 200 cm	standard 80	cm
DISPLAY	graphic		
BACKLIGHTING	Color LED		
POWER SUPPORT	3xAA batteries stylus		
AUTOMATIC SHUT-OFF	1		min
WEIGHT	600		g
THRESHOLD EXCEEDMENT WARNINGS	Audible/visual		

AgriCo reserves the right to change specifications and features at any time without notice

Punta AgriCo is a dosing valve for big bags (large bags) typically containing seeds, feed, and pellets.

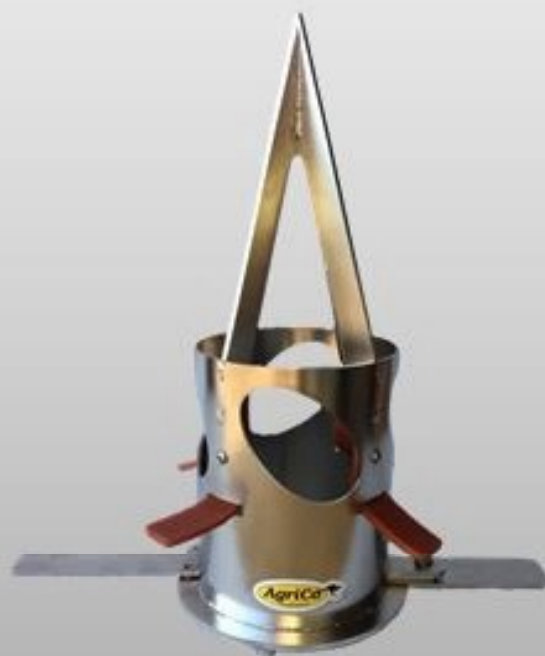

Using this device allows you to completely and/or partially Empty their contents easily, quickly, and precisely.

Strengths of the *Punta AgriCo*:

- The only stainless steel product on the market
- Its sturdy structure makes it indestructible and corrosion-resistant
- When placed on the ground, it is stable and the tip penetrates the bag easily.

Its special shape facilitates the release of the product and provides an excellent watertight seal when closed.

- The only one of its kind with a safety lock to prevent inadvertent opening of the gate and loss of product.
